## Septic System Do's & Don'ts

- Do:**
- Know where your septic tank and leaching bed are located on your property
  - Keep accurate records of septic system maintenance, pump outs & service calls
  - Test your well water at least three times per year for indicator bacteria (spring, summer and fall)
  - Have your system inspected/pumped out by a licensed installer or sewage hauler – every three years for a house & every five years for a cottage or 1/3 full whichever comes first – best time of year for pump out is summer or fall before the cold weather
  - Clean the effluent filter (located in the tank where it flows to the bed) at least once a year
  - Direct surface water/drainage away from leaching bed
  - Conserve water use to reduce amount of wastewater needed to be treated

- Don't:**
- Put fats, oils, paints, food waste, chemicals, pharmaceuticals, sanitary products, condoms or anything plastic down the drain
  - Use special additives that are claimed to enhance your septic system
  - Use cleaning detergents that are high in phosphorus
  - Enter your septic tank
  - Dig on your property without knowing where your septic system is located
  - Drive or park over your septic system
  - Pave over your leaching bed
  - Build a deck or accessory structure over your septic system
  - Put an above ground pool, outdoor skating rink or garden over your leaching bed
  - Plant tree over your leaching bed
  - Allow livestock over your leaching bed
  - Connect rain gutters, sump pumps or storm drains into your septic system
  - Drain hot tubs or pools into your septic system
